

# Introduction

**This Project Report presents a Data Management System in C programming language based on the data of college students which we will be using in many ways in which we can collect and store data and even we can categorize them in many ways based on attendance, marks, library dues and in this program we can store new student's data.**

**So to make data management easy we present here the digital version of the data management system based on our knowledge of basic programming aspects like loops, conditionals, functions, file handling, etc.**
